

Enko Bonanjo School Science
Fair 29th of March 2023

Dear Parents,

Accept warm greetings from me and the entire Enko staff. As you know, science, technology and engineering are basic skills expected by employers and these skills developed by our students will be very valuable for them in the universities and life beyond. As Twenty First Century citizens, these students will also have to make some of the toughest decisions of any generation, based on their understanding of emerging science and technology.

To this effect, **Enko Bonanjo is organising a science fair on the 29th of March 2023.** Science fair involve students in the practices of science and engineering, requiring them to apply those skills learned in the classroom to a topic of interest to them. Doing science is key to understanding science.

Hands-on scientific investigation and invention are the focus at our particular fair. Your child will design, test, analyse, and present a project that uses scientific methods to solve a problem. The sky's the limit!

I am writing you this letter, to notify you that, the bulk of the work will be done at home and these students need some materials as well as help and guidance from you. Teachers will check or guide them periodically. However, much of the work will be self-directed. You, parents are encouraged to offer emotional support and reminders, but to allow children to do the projects by themselves.

We thank you for your continuous support and don't hesitate to call or email with any questions.

Sincerely yours in Education

Mamme Samson Nkwelle (Head of science department and Science fair coordinator)
